Click to download the Telangana Class 12 books PDF for free. Here you will find the Intermediate II Year Textbooks for Maths, Physics, Chemistry..Long-term follow-up of minimal surface resection for benign epidermoid cysts of the posterior fossa. Epidermoid cysts are usually found incidentally, presenting as small lesions on the cerebellar surface. We describe a technique of minimal surface resection for the treatment of epidermoid cysts in the posterior fossa. A retrospective review was undertaken of prospectively collected data on patients who underwent minimal surface resection of a posterior fossa epidermoid cyst between September 2003 and September 2014. We report the outcomes of our series of patients with a minimum follow-up of 2 years. Fifteen patients underwent minimal surface resection for benign epidermoid cysts. The median age at presentation was 30 years (range, 3-70 years) and the male to female ratio was 8:7. The mean cyst size was 3.2cm (range, 1-4.5 cm) in diameter. All patients had a pre-operative MRI to localize the lesion. Cyst removal was achieved in all cases, without gross total resection in one patient who subsequently underwent microsurgical resection. Thirteen patients had a benign cyst, one had a tanyctic epidermoid cyst and one had a symptomatic secondary cyst at presentation. The median follow-up was 58 months (range, 24-114 months) and recurrence was noted in one patient at 10 months post-operatively. Minimal surface resection of epidermoid cysts is a safe and effective method of treatment with a low recurrence rate. Patients with large or symptomatic lesions, however, may 2d92ce491b
