Lang, 2016, euro 611.00, 96x63x25 cm, illus., index., 30 color charts., : ill., : ill., ill., ill., ill., ill., ISSN 978-92-8-7085-27-8 (print) 978-92-8-7085-27-5 (ebook) 978-92-8-7085-27-6 (pbk.) 978-92-8-7085-26-9 (ebk.) 978-92-8-7085-26-6 (pbk.) 978-92-8-7085-26-3 (ebk.) In the mid 1950s the Italian government established a High Council for Technology, founded the Centre of Technology and Engineering and proceeded to research and development of new manufacturing techniques and technologies. These technologies and machinery are often named after the famous factories where they were created. In this book the author suggests a series of topics related to the history of this area and analyses some of the most important engineering developments and new machinery or techniques of the past and present, through the description of some of the most important Italian technology producers, from La Fabbrica di Bergamo to Agnelli, Visco and Morelli. **THE CONTENT OF THIS BOOK:** The present study is aimed at creating a historical panorama of the field of technology and engineering in Italy. The focus is on those machines and technologies, the most significant, which have been developed in the last forty years, as well as on some of the most important brands or companies that have emerged and evolved in this period. The study includes also some specific topics on subjects such as: machine tools; equipment; automobile industry; aviation; sport equipment; applications in agriculture; medicine, pharmacy, and clinical research; military engineering; telecommunications and electronics; and space technology.. **THE CITATION SITES OF THE MACHINERY AND TECHNOLOGIES DESCRIBED IN THIS BOOK:** 1. Title: Front Cover. 2. (If the above information is incorrect, please go to the publishers or the copyright holder.) 3.
