- Histogram, Moving Average, Exponential Moving Average, Bollinger Bands, RSI, MACD, ADX, ATR, etc. - Historical data statistics method: In addition to, the normal, percentage statistics method, median statistics method, mean statistics method, first order statistics, variance statistics method, second order statistics, etc. - Statistical forecast is based on daily closed prices, weekly closed prices and cumulative closed prices. - The forecast of indicators is also realized. In addition, in the program it is possible to forecast a function such as R-squared, T-squared, F-squared, etc. - Group's statistics and calculate the time-series statistics of the data sequence, such as numbers of peaks, troughs, extremes, etc. - Also, we can calculate the maximum daily high/low, minimum daily high/low, average daily high/low, maximum weekly high/low, minimum weekly high/low, maximum monthly high/low, minimum monthly high/low, maximum annual high/low, minimum annual high/low, etc. - In addition, for the profit and loss chart you can calculate the length, high, low, average, maximum, minimum, accumulated amount of each data, etc. - Statistics method is a list of time-series statistics, we can set the period of the statistics method to calculate the data. - To calculate the statistics method, we can also set the period of the statistics method to calculate the accumulated amount of the data. - There are statistic formulas, such as MACD, ADX, ATR, etc. - Also, the distance between the two values is calculated,

and we can change the period and update the average of the distance between the two values. - You can check out the open of the one to one relationships, the relationship between the open and close, the relationship between the close and open, etc. - The Data Analysis of the data comparison is realized through the settings in the function. - If the data is not in the list, it will be calculated. - There is a method of drawing a graph, and the statistics of the data is shown on the graph. - There is a function to calculate the percentage of the sample (every 25, 50, 100 or the whole number). - Trend analysis of the data is also realized by drawing a graph. - The reason for the statistic is to change the settings in the function
