Use only in a well-ventilated area.Q: Trying to understand a problem from a textbook So I have this exercise from a textbook: Let  $p(x)$  be a polynomial with integer coefficients. Prove that there are integers  $a$  and  $b$  such that  $p(a)$  and  $p(b)$  are both prime numbers, and  $p(a) \equiv p(b) \pmod{p(x)}$  So I do have a start with this: Since the polynomial is integer there is no common factor, so for this case,  $p(x) = x^n + a_1x^{n-1} + \dots + a_n$ , where  $n$  is the degree of the polynomial. How should I go on? I am stuck. Thanks in advance! A: Hint: If  $a$  and  $b$  are relatively prime, then  $x^n \pmod{p(x)}$  factors as  $(x^n \pmod{p(x)})^2 \equiv x^{2n} \pmod{p(x)} \pmod{p(x)}$ . Prognosis in patients with peripheral arterial disease with a history of cerebrovascular disease: results of a five-year follow-up. Despite the clearly documented increased risk of ischemic events among patients with peripheral arterial disease (PAD), patients with cerebrovascular disease (CVD) remain underrepresented in clinical trials and routine practice. The outcome of PAD patients with a history of CVD is unknown. The aim of this study was to evaluate the long-term prognosis of PAD patients with CVD. A total of 907 patients with PAD were prospectively evaluated for vascular risk factors, cardiac disease, and CVD. Ischemic events ( $n = 236$ ) and all-cause mortality ( $n = 293$ ) were recorded. During a 5-year follow-up, 73

VF 6.6 does not provide full updates for Microsoft Developer Studio. Starting with version 6.6, the Compaq Fortran Companion Products CD-ROM will no longer ...  
#Fortran version updates for Microsoft Developer Studio Fortran versions of Microsoft Developer Studio versions 4.2, 4.3, 4.5, and 6.1 are available on the Compaq Fortran Companion Products CD. The CD contains updates to Fortran 90 and Fortran 95, as well as the Fortran 97 version (the Fortran 95 version, which Microsoft will distribute later, is supported mostly in debugging mode). fffad4f19a
