---

reality experience of the Arctic seafloor from above, but no one has ever been close enough to the sea floor to take it in under their own eyes. But now, for the first time, scientists have mapped the 3-D structure of the Arctic seafloor, and scientists can now look into its remote regions in real time using the Monterey Multibeam echosounder (MBES), an instrument capable of collecting information from depths as deep as 7,400 feet (2,300 meters).

---

The map provides a new way to visualize data from the seafloor, the surface and the ocean's deep-water layer, all of which can be used to understand the ocean's circulation and how it has changed over the last 50 years. “The information we have today is like having a picture in a box; the more data you have the more you can
