Retina Network Security Scanner [Latest]

The most trusted product of the category, CheckMyMAC is a complete toolkit that is very similar to the Windows utility of the same name. The program allows you to scan and detect every MAC address present in the computer system. CheckMyMAC is fast, easy and of course free. The process is very simple to use, you only need to specify the MAC address you want to detect and the program will automatically detect it. What's more, you can discover devices that are in use on your network, as well as, static MAC addresses that haven't been used for quite a long period of time. This feature enables you to detect all the MAC addresses being used in the same network or in the community. However, if you want to scan all the MAC addresses present in the system, you can select the "All available MAC addresses" option from the main interface. Another interesting discovery feature enables you to discover all the devices connected to your network that are able to use multicast services. Every time you run the program, the respective MAC address is detected, then placed in a table and it is stored for future use. To make it easier to discover and locate MAC addresses you can set up a folder structure in order to arrange all the found addresses. The layout of the app is very simple; you just need to add the MAC addresses you want to scan and the table will be updated accordingly. If you want to scan the device for a long time, you can disable the device from starting up and check if the MAC address was detected. If you forget to disable the device from booting, you can easily navigate to the details section and the name of the device will be presented there.
