More particularly, it pertains to a method of converting the thermal energy of a concentrated solar collector into mechanical power for driving an electrical generator. 2.

Description of the Prior Art A solar collector converts radiant solar energy into heat by absorbing such energy and transmitting it through an absorbing fluid that transports the heat to a heat energy receiving body, which in the specific embodiment of this invention is a steam turbine. The amount of heat required to drive an electrical generator is a function of the efficiency of the collector. Thus, the degree of cost efficiency of the collector is governed by the amount of heat produced by the collector per unit of energy absorbed by the collector. Collectors fall into two general categories, one being those collectors characterized by high thermal resistance and one being those characterized by low thermal resistance. The low resistance type of collectors consists of tubes or pipes through which fluid passes, the tubes being heated by radiant energy transmitted from the sun. This type of collector is limited to the amount of radiant solar energy which can be transmitted through the tube material, which in turn is a function of the average tube diameter, the maximum diameter of the tube or pipe, the amount of thermal insulating material separating the tube or pipe from the fluid and the particular fluid which is used. Thus, for a given solar collector, the

Alamethicin (Alm) is a polypeptide antibiotic isolated from the fungus *Trichoderma viride* which is active as an ionophore. It kills whole cells and sperm by increasing membrane permeability and, eventually, inducing leakage of the intracellular contents. Alm has been used for antiproliferative activity, anesthetic and antifungal activities. Alm has, also, been used to prevent post-operative pain, non-hodgkin's lymphoma and to reduce neuralgia. It seems to work through different mechanisms depending on the pathology. A possible mechanism underlying the effect of Alm on gut pain is the activation of K⁺ channels in the membranes of the pain-signalling neurons in the dorsal root ganglion (DRG). In this 82138339de
