patchtombraider2013arabicPCgame Thanks. One error: the first text at the far right of the second page, on the line .

patchtombraider2013arabicPCgame (link is external) patchtombraider2013arabicPCgame Thanks. Now I think it is safe to say that the path was correct, but that there is no .

patchtombraider2013arabicPCgame See above. If I am right the text I have quoted at the end of the first page, on the second line , is a later addition.

patchtombraider2013arabicPCgame and that there is no . patchtombraider2013arabicPCgame The signature has been removed (on the below link) for this answer .

patchtombraider2013arabicPCgame

patchtombraider The 'contact-sensitive' N-acetyl-D-galactosamine-binding lectin from *Clitoria ternatea* (Strelitz) that specifically recognizes

murine natural killer (NK) cells. *Clitoria ternatea* is a member of the leguminosae family and has been used for centuries in many Asian countries for food. Our previous studies have shown that this plant possesses antitumor activity in vivo and in vitro. In this study, a lectin from *C. ternatea* leaves was purified and its specificity was analyzed using flow cytometry. The purified lectin has a molecular mass of approximately 50 kDa. It is a glycoprotein with sugar chains that consist of N-acetyl-D-galactosamine (GalNAc) and D-galactose, but not mannose, in its sugar chains. It was named the C-ter lectin, because it is present only in the leaves of *C. ternatea*. It specifically binds to a murine NK-like cell line, NK-92, and functions as a NK cell-specific lectin. It was also found to bind specifically to NK-92 cells and not to other hematopoiet
