In the following sections we describe how to use AutoCAD to work with: 2D drawing 2D drafting B-rep modeling 3D drawing 2D drawing Using an operating system that supports printing, you can save AutoCAD drawings as portable network graphics (PNG) files. The AutoCAD commands available for creating portable files include: Current drawing state with only one layer displayed (Layer Setup) Save Drawing As Portable Network Graphics (PNG) Print to PDF Print to Portable Document Format (PDF) The Portable Document Format (PDF) is an Adobe Acrobat format that serves as an electronic version of paper documents. It is typically used to preserve the look and feel of printed documents as they are viewed on a screen. PDF files can also be used to create e-mail messages. The following commands allow you to create PDF files from AutoCAD drawings: Print To File Print To PDF Also, you can print from within AutoCAD using the PostScript print interface or the PDF print interface. History AutoCAD was initially developed for the Stratus Computer Corporation's AutoCAD 2000 product and first released on May 25, 1997. Stratus terminated development of the AutoCAD product when it sold its graphics division to Microsoft in late 1999.

AutoCAD LT was launched in September 2000 and was the first version of AutoCAD to be available for the Microsoft Windows operating system. AutoCAD LT and AutoCAD 2000 are the only versions of AutoCAD available on the Windows platform. In 2001, AutoCAD LT was renamed AutoCAD Express. AutoCAD R14 came out in August 2005. In 2006, AutoCAD was the number one selling graphics software for U.S. business professionals. AutoCAD is also the leading AutoCAD platform for the automotive industry. , AutoCAD had the largest installed base of any CAD software of any platform. AutoCAD 2010 was launched on March 8, 2010 and incorporates several design features for users of AutoCAD 2009 and later. In addition, AutoCAD 2010 supports a new feature called the Dynamic Block Browser. The Dynamic Block Browser allows the user to browse for blocks by using the design and properties of the blocks in the current drawing. This improves the efficiency and speed of block creation and makes it easier to access blocks within a design that are already created. AutoCAD 2011 launched on March 30, 2011 and is the first version of AutoCAD to be based on the Windows 7. In 2013, AutoCAD 2012 was released as the successor to AutoCAD R13. AutoCAD 2012 is the first version of AutoCAD to be based on the Windows 8. In 2015, AutoCAD 2016 was released as the successor to AutoCAD 2012. AutoCAD 2016 is the first version of AutoCAD to be based on the Windows 8.1. In 2017, AutoCAD 2018 was released as the successor to AutoCAD 2016. The current RBC replacement therapy is limited by the short supply of human RBC units, the risks involved in transfusion, and the possible transmission of viral diseases. RBC transfusions can lead to multiple diseases in the transfused patient, including hepatitis, AIDS, and a variety of bacterial diseases. The development of a safe and effective RBC replacement therapy will benefit patients by overcoming the problems of current treatment, including the risks of infection and the limited supply of blood. The short supply of RBC units and the risks associated with blood transfusions represent a major health care problem. Currently, the only treatment for acute anemia is blood transfusion. Current medical practice demands that blood be donated, stored for transfusion at the time it is needed. Patients require units of RBCs at a moment's notice and the supply is relatively short. The delivery of an adequate supply of blood to patients would be greatly enhanced by the availability of a safe and efficient source of human RBCs. The focus of this proposal is to develop a stem cell based production system for human RBCs. Unlike traditional RBC production systems which rely on immortalized lines, this system will be based on stem cells. Two sources of stem cells will be investigated: human ES cells and iPS cells. Specifically, the ability to differentiate human ES and iPS cells

---

into erythroid progenitors will be examined. Further, a stepwise differentiation system of the erythroid lineage from undifferentiated ES/iPS cells will be developed. This stepwise differentiation system will be used to determine if the production of RBCs from undifferentiated cells can be achieved. The application of this system will be expanded to include the generation of RBCs from hematopoietic stem cells. The success of this proposal will provide a new and potentially unlimited source
