Q: Return empty list I'm new to programming in Python, so bear with me please. I'm trying to make a function in a separate file (calls.py) that returns a random list of ints. The list should be completely empty (no elements). The problem is, however, that I don't know how to set an empty list. Here is the function in the calls.py file: def get\_calls(): from random import \* ll = [] # other stuff return ll The function should pick a random element from the list, and I have it working (by returning ll, which is an integer list) except I want it to return an empty list (no elements). But the problem with that is that the ll list has a random number of elements in it that I really don't want. I've tried many ways of returning an empty list, and the closest I can get to is using ll=list() and removing a random int from the list, but that doesn't really work. For example, I tried to do def get\_calls(): from random import \* ll=list() # other stuff if range(ll)==[]: return ll else: return ll.remove(random.randint(0 570a42141b
