negative supercoiling, can be a potential signal for
triggering protein synthesis. Artificial supercoiled
RNAs with a size of less than 100 nucleotides trigger
protein synthesis in a Sendai virus system. The
significance of this observation was investigated
using endogenous RNAs with a size of more than
100 nucleotides. Pre-transcriptional endogenous
RNAs of kidney cells contained negative supercoils
at a higher rate than those of liver cells. The amount
of endogenous RNAs in the cell extracts from the
kidney also significantly increased with an increase
in negative supercoiling. The data obtained suggest
that there is a direct relationship between negative
supercoiling and protein synthesis in the cell. The
possibility that endogenous RNAs are the signals for
the protein synthesis is discussed. Q: LINQ-to-SQL

LEFT JOIN with left only LEFT JOIN On the other hand, LEFT JOIN only. class Person { int Id { get; set; } string Name { get; set; } } class Dog { int Id { get; set; } string Name { get; set; } int PersonId { get; set; } } I've just started trying to use LINQ to SQL.

How can I write LINQ query for my current scenario? A: You should be able to write this as a single LINQ expression, only using a single JOIN - not sure if that is exactly what you want, but something like this should work:
