Like Windows Search, Microsoft Windows also has a search feature for finding files and other important stuff on your computer. However, when you're on the go, this doesn't really help that much. Sure, you can just launch the Windows application and do a search on your system, but that isn't a very user-friendly option, especially when you're using it on a mobile device. Still, there are some alternatives that might help you out here. One of them is simply called Windows Search, and it's built in to Windows since Windows XP. It comes with a web browser as well as a local program, and it's what comes bundled with Windows and can be found when you launch the Windows application. It might not be as good as you were hoping, though, since the search feature is merely optional, and it's really not that useful on a mobile device. Of course, you need to know that the Dolphin engine isn't as good as Google, but it will work for certain needs. And just like Google, the application can be used on the go. The only thing you need to be aware of is that the application isn't very compatible with Windows 10. So, that means if you're using Windows 10, you might need to take a look at another option. Find the best file search engine for Windows Another solution for searching for files on Windows computers is to turn to a third-party application. Not only does this way make it easy to perform a search on your system, but it can also help you find things like file extensions, file type, file size, and more. Here, we're going to look at the top five file search engines for Windows. Dolphin The first application that we're going to look at is Dolphin, and it's one of the more popular tools in the industry. It's designed to be a fully-fledged search engine, and it supports all the file types that you can think of. The program is completely free, so there's nothing stopping you from trying it out. It's also available for Windows and for Linux. The interface is a bit simple and doesn't get the fancy features that you might be looking for, but
