Security Expert [Updated]

Security Expert includes a unique cryptographic algorithm that allows you to implement a range of different protection levels for the images, while protecting a number of different formats, including JPEG, JPEG2000, TIFF, GIF, BMP, PNG, WBMP, and TGA. The application allows you to protect individual images or even several images at the same time. It also allows you to set up a password protection mechanism for images, a feature that you can even remotely manage from any remote location. A unique key function enables you to implement the protection of an image in a single step. In addition, the application offers users a number of different options that include adding watermarks to the images and managing various levels of image quality while encrypting them. The application includes built-in tools that allow you to monitor the health and status of your images. The tools can be used to troubleshoot security problems with remote access to images, while the information is automatically updated. The built-in tools include a special e-mail notifier, that allows you to monitor if the images are being opened from unauthorized sources. The utility also includes a Status Viewer tool, which enables you to see the status of images when they are being opened. The built-in tool enables you to monitor and set the level of protection for the images, which includes various levels of protection from Level 1 (low security) to Level 8 (maximum protection). In addition, the application features an optional WebDAV server, which is not only used for monitoring but can also be used as an alternative access to encrypted images. You can also use the tool to change the settings of the watermark or message in the images. You can also use the application to set up to eight remote locations from which you can remotely manage the password protection for images. You can use the application to easily implement security settings for Windows Live Photo Gallery or Windows Media Photo Gallery, as well as for multiple photos. The application can be used to encrypt any size of images, including very large ones, while preserving all of the attributes of the image, including the image quality. The application also includes a version numbering system, which allows you to view all versions of the images.
